

JEE SOCIETY DIAGNOSTIC REPORT

PROCESS BEGINS WITH CLARITY,
AND THIS IS CLARITY

Name: Sreyash
JEE Society Score: 62
Expected Percentile: 84.2

JEE SOCIETY

since
2023

JEE Society Score (Readiness Index): 62/100

Current Projected Percentile: N/A - N/A

Projected Percentile (If Key Corrections Are Made): N/A - N/A

Founder's Note

You have immense potential, but potential grows only in the right environment.

Remember, This exam matters because it opens doors to colleges that shape how you think, who you learn with, and the standards you live by for the next four years.

If you take this phase seriously, those four years can give you clarity, confidence, and direction that compound for the next forty years.

This report is not about fear or pressure - it is about helping you. Use this wisely.

SREYASH GUPTA

PCM STRATEGY ANALYZER

1

PHYSICS STRATEGY

You are falling into the 'PhD Trap'. You love Physics, so you keep studying it because it feels good. But the exam treats Physics, Chemistry, and Math equally. Scoring 100 in Physics and 20 in Chemistry is a bad rank strategy. You are using Physics to avoid the pain of studying your weaker subjects. You need to cap your Physics time and force yourself to face Chemistry/Math.

2

CHEMISTRY STRATEGY

Hating Chemistry is expensive. It is the only subject where you can score 80 marks in 50 minutes. You don't have to love it; you just have to do it. Start with Physical Chemistry—it is logical and math-based (like Physics). Then move to Organic logic. Treat Inorganic as 'Daily News'—just read it without stress.

3

MATHS STRATEGY

You are trying to prove you are smart by solving the hardest problems. The exam gives +4 marks for a hard integration sum and +4 marks for an easy Matrix sum. Why choose the hard one? Your ego is wasting your time. You need to learn humility. Solving easy questions fast is a skill. Solving impossible questions is a hobby. Do not make the exam your hobby.

R.E.F ANALYSIS

(RecallStrength-Efficiency-Focus Potential)

Blanking out is an emotional issue, not an intellectual one. Your brain goes into 'Fight or Flight' mode and shuts down the memory centers. You need to practice exam temperament. You need to normalize the pressure so your brain stops panicking.

Staring at a question for 10 minutes is a crime in JEE. You are likely trying to understand the 'Deep Meaning' of every question or afraid of writing the wrong step. You need to be messier and faster. Scribble, try options, move on.

You skip questions because they look long or complex, but they might be simple substitution problems. You are leaving easy marks on the table due to anxiety. Read every question at least once.

BIGGEST BARRIER & MINDSET

You are scared of getting low marks, so you don't take tests

But without tests, you won't improve, so you will get low marks. Break the loop. A bad score in a mock test is good—it shows you where to improve safely.

Giving up is easy. Trying is hard. But the regret of giving up lasts forever.

Health • Energy • Environment

Studying at night is peaceful, but if your exam is at 9 AM, your brain needs to be awake then. You are currently training your brain to sleep during exam hours. Dangerous.

Falling sick breaks momentum. It takes days to recover flow. Prioritize immunity. warm water, home food, proper sleep. Stop taking risks with street food.

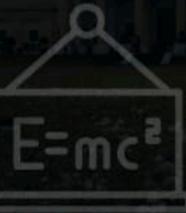

Toxic environments drain energy. Use the library or school as an escape. If you must study at home, use late nights or early mornings when the chaos sleeps.

Comparisons hurt. Understand their intent is usually good, but the method is bad. Develop a 'thick skin'. Listen, nod, but don't let it enter your heart. Prove them wrong with action, not arguments.

$$(\sqrt[n]{a})^m = \sqrt[n]{a^m} = a^{\frac{m}{n}}$$

NOTE TO PARENTS

(If you are reading this)

If you are reading this, it already tells me something important about you.

It tells me that you care, not just about marks, but about your child's future.

Let me tell you,

Your child is trying, even on days when progress is not visible.

JEE preparation has ups and downs, and a few bad tests do not define your child's future.

I have personally seen many students who struggled initially, but with the right environment and belief from their parents, they are now studying in IITs and their dream colleges.

What helps students most is calm support, regular routine, and trust from home.

Please focus on their sleep, food, health, and a few peaceful study hours every day.

Thanks for trusting JEEsociety ❤

//

EXECUTION PLAN

1. Simulate a mini-exam. 10 questions, 20 minutes. Create a high-stress environment at home. Teach your brain that 'Timer = Focus', not 'Timer = Panic'.
2. Practice deep breathing techniques before every study session. Lower your baseline anxiety level.
3. Set a timer for 3 minutes per question. If the alarm rings, you MUST leave the question. Learn to let go.
4. Focus on 'Quantity' over 'Quality' for one week. Solve 50 easy questions daily just to build momentum.
5. Open a past paper. Find the longest, scariest looking question. Read it carefully. Try to solve it. You will be surprised.
6. Make it a habit to scan the entire paper. Never leave a question unread.
7. Take a test today. Expect to score zero. Tell yourself 'I don't care'. Just sit through it.

CONCLUSIONS

You have the luxury of depth. Don't just solve Mains questions; touch Advanced level concepts. Build a solid base. The mistake you can make is 'Procrastination' thinking you have time. Time flies.

You cannot improve what you don't measure. A mock test score of 50 is better than ignorance. Face the number. Then improve it.
